ASP.NET Sessions State

ASP.NET Session Mode

In ASP.NET there are 4 types of Session Mode.

Off: We can disable the session mode for the entire application using the off mode.

SQL Server Session Sate:

Now we are implemented session state in SQL Server-

1st- Open CMD Terminal

2nd- Paste in CMD Terminal - cd C:\Windows\Microsoft.NET\Framework\v4.0.30319

N.B: Go to Framework maximum version like- v4.0.30319, v2.0.50727

3rd- Write this command at cmd than hit enter-

Windows Authentication:

aspnet_regsql.exe -S YourServerNameHere -E -ssadd -sstype p

SQL Authentication:

aspnet_regsql -S YourServerNameHere -U UserName -P Password -ssadd -sstype p

Example(SQL Session Storage):

aspnet_regsql.exe -S DESKTOP-7G6D00U\SQLEXPRESS -E -ssadd -sstype p
aspnet_regsql -S DESKTOP-7G6D00U\SQLEXPRESS -U sa -P Aml@1234 -ssadd -sstype p

Example(Custom Session Storage):

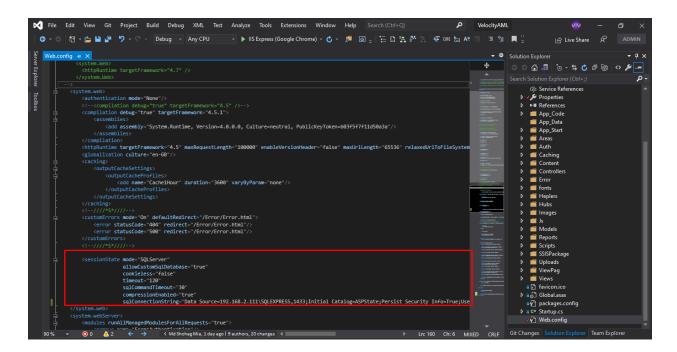

aspnet_regsql.exe -S DESKTOP-7G6D00U\SQLEXPRESS -E -ssadd -sstype c -d TestSessionDB aspnet_regsql.exe -S DESKTOP-7G6D00U\SQLEXPRESS -U sa -P Aml@1234 -ssadd -sstype c -d TestSessionDB

```
Administrator. Command Prompt

C:\Windows\Microsoft.NET\Framework\v4.0.30319>aspnet_regsql.exe -S DESKTOP-7G6D00U\SQLEXPRESS -E -ssadd -sstype p
```

4th- Done

Finally add some xml code in Web.config

Happy Coding
